According to our (Global Info Research) latest study, the global 3D Welding Vision System market size was valued at USD 321 million in 2022 and is forecast to a readjusted size of USD 439.6 million by 2029 with a CAGR of 4.6% during review period.

3D Welding Vision System is a vision system for automated welding. Its main components include 3D cameras, image processing software and welding robots. The basic working principle of the system is to use a 3D camera to capture images of the welding area, then analyze and process them through image processing software, and finally feed the processed data back to the welding robot to guide it to perform automated welding.

The advantage of the 3D Welding Vision System is its ability to provide precise welding position and welding depth information, thereby improving welding quality and production efficiency. At the same time, the system also has the characteristics of strong applicability and high stability, which can greatly reduce labor costs and error rates.
