Abstracts

According to our (Global Info Research) latest study, the global 3GO Plasticizer market size was valued at US\$ 117 million in 2025 and is forecast to a readjusted size of US\$ 142 million by 2032 with a CAGR of 2.9% during review period.

3GO plasticizer, also known as triethylene glycol diethylhexanoate, is a solvent-based, cold-resistant plasticizer with excellent low-temperature resistance, durability, oil resistance, UV resistance, and antistatic properties. It also has low viscosity and moderate lubricity. Global production reached 246,900 tons in 2024, with an average selling price of \$3,790 per ton.

The main raw materials for this product are 2-ethylhexanoic acid and triethylene glycol. The rapid expansion of the downstream market for 2-ethylhexanoic acid in the past two years has fueled strong growth for the product. Triethylene glycol is a product derived from ethylene refining, and its price is highly correlated with crude oil prices. Major triethylene glycol manufacturers include large refining and chemical companies such as Hengli Group, Sabic, North Huajin Chemical Industries, Nippon Shokubai, etc. Looking at downstream development, the booming automotive and construction industries are driving rapid growth in laminated safety glass for vehicles and high-rise buildings. 3GO plasticizers, as a specialized plasticizer for laminated film, are also expected to experience rapid growth. GO plasticizers are a new, environmentally friendly plasticizer that contains no benzene rings, is harmless, inexpensive, and offers effective additives. They can serve as an alternative to traditional plasticizers, improving the safety of related products.

In 2025, global sales volume is projected to reach approximately 60,000 tons, with an average ex-factory price ranging from \$1,600 to \$2,200 per ton; the gross margins of

major industry manufacturers are expected to fall between 15% and 25%.

The primary drivers for its growth stem from the continued application of PVB laminated glass in automotive safety, architectural security, sound insulation, impact resistance, and high-transparency glazing?particularly the rising demand within high-end automotive glass, building curtain walls, and laminated safety glass for plasticizer systems characterized by low haze, low migration, and low volatility. Conversely, constraining factors include the competitive substitution posed by alternative PVB plasticizer systems, while standard industrial-grade products face price competition from Chinese suppliers as well as cost-reduction pressures from downstream PVB film manufacturers. In the future, incremental growth for this product will be driven primarily by the upgrading demand for automotive laminated glass, architectural safety glass, and high-transparency PVB films; consequently, the focal points of competition will center on low chromaticity, low odor, low volatility, batch-to-batch consistency, and compatibility with specific PVB formulations.
