## Abstracts

3 $\mu$ m - 5 $\mu$ m Midwave Infrared Optics are specifically designed to process radiation in the mid-wave infrared (MWIR) band and are widely used in thermal imaging, chemical detection, fire control systems and scientific research. These optical elements effectively deliver infrared radiation in the 3 to 5 micron wavelength range, which is particularly useful for detecting temperature changes and chemical composition. Mid-wave infrared optical elements are usually made of zinc sulfide (ZnS), calcium fluoride (CaF<sub>2</sub>), zinc selenide (ZnSe) and other materials. These materials have high transmittance and good imaging performance in the mid-wave infrared region. This type of optical components plays a key role in many fields such as military reconnaissance, environmental monitoring and industrial inspection, and can provide accurate information under various environmental conditions.

According to our (Global Info Research) latest study, the global 3 $\mu$ m - 5 $\mu$ m Midwave Infrared Optics market size was valued at US\$ 105 million in 2023 and is forecast to a readjusted size of USD 170 million by 2030 with a CAGR of 6.9% during review period.
