Abstracts

The global 4-Aminotoluene-3-Sulfonic Acid market size is expected to reach \$ 110 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

4-aminotoluene-3-sulfonic acid, also commonly known as 4B acid in the industry, is an aromatic sulfonic acid organic intermediate. Its molecule contains both amino and sulfonic acid groups, and it has strong hydrophilicity and solubility, as well as high coupling reaction activity. Therefore, it is often used as a key precursor in the synthesis of azo dyes, organic pigments, and some functional dyes, to construct a stable color skeleton and regulate the color and performance of end products. In 2025, global 4-Aminotoluene-3-Sulfonic Acid production reached approximately 46.63 K MT, with an average global market price of around US\$ 1,687 per MT.

4-aminotoluene-3-sulfonic acid is a highly standardized dye pigment intermediate, and its demand is highly correlated with the prosperity of downstream industries such as textile printing and dyeing, packaging printing ink, plastic coloring, and coating pigments. Overall, it exhibits stable stock and periodic price fluctuations. The competition on the supply side is based on scale and cost control, but in recent years, the threshold for environmental compliance, safety production, and waste management has been raised, causing the industry to shift from simply combining production capacity to combining specifications and process stability. Enterprises that can provide high-purity, low impurity, low metal ion and low inorganic salt residue, and maintain batch consistency are more likely to obtain export and high-end pigment customer orders and obtain premiums. The future structural opportunities mainly lie in clarifying two paths: one is to upgrade to high-purity and customized specifications, serving pigments and functional dyes with higher requirements for color consistency and weather resistance; The second is to extend downstream derivatives and complex intermediates, reducing the price fluctuation risk of single intermediates and improving profit quality through

product combination and customer binding.
