Abstracts

The global 4-Bromo-2-Chlorophenol market size is expected to reach \$ 498 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of 4-bromo-2-chlorophenol was approximately 18,500 tons, with an average global market price of around USD 20/kg. The gross margin of major industry producers was generally in the range of 20%–35%.

4-Bromo-2-chlorophenol is a halogenated phenol fine chemical intermediate. Its molecular structure contains bromine, chlorine and a phenolic hydroxyl group, giving it strong potential for further functional-group transformation. Its upstream raw materials mainly include chlorophenols, brominating agents, solvents, catalysts and purification auxiliaries. The midstream stage involves bromination, separation and purification, crystallization, drying and quality control. Downstream applications can be divided into agrochemical intermediates, pharmaceutical and organic synthesis intermediates, and other fields. Among these, agrochemical intermediates represent the major application area, where the product can be used in the synthesis of intermediates related to profenofos and other agrochemical products. Pharmaceutical and organic synthesis intermediates are mainly used in the synthesis of drug molecules, key building blocks or fine chemicals containing halogenated aromatic structures. Overall, 4-bromo-2-chlorophenol is a small-volume, highly specialized halogenated aromatic intermediate, and its market demand is closely related to demand for pesticide technicals, fine chemical synthesis and custom chemical manufacturing.
