## Abstracts

The global 4-(Butoxymethyl)-2-methoxyphenol market size is expected to reach \$ 161 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

In 2025, the global production of 4-(Butoxymethyl)-2-methoxyphenol is estimated to be approximately 760 tons, with an average selling price of about US\$150 per kilogram. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 15-25%. 4-(Butoxymethyl)-2-methoxyphenol is an oil-soluble warming agent, a derivative of vanillin, which gently and persistently stimulates the skin to produce a warming sensation, promoting local blood circulation and metabolism. It is commonly used in slimming creams, weight loss products, skincare products, food, and fragrances, providing a warm and pleasant vanilla scent and enhancing the penetration and absorption of other ingredients.

The main upstream raw materials for 4-(Butoxymethyl)-2-methoxyphenol include vanillin (synthetic or naturally extracted) and butanol, which are used in its preparation through an etherification reaction. Its downstream applications mainly include the food industry (as a highly effective and heat-resistant flavor enhancer in baking, beverages, and confectionery), and daily chemical fragrances (used in formulating creamy scents for skincare products and detergents).
