Abstracts

The global 4-Chlorophenol market size is expected to reach \$ 231 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

4-chlorophenol is a monochlorophenol organic compound, also known as p-chlorophenol, with a CAS number of 106-48-9 and a molecular formula of C_6H_5ClO . It is a chlorinated aromatic intermediate with a chlorine atom located in the para position of phenol. This product is usually in the form of a white to off white solid, powder, block or crystal, with reaction characteristics of phenols and chlorinated aromatic compounds, and can participate in fine chemical synthesis reactions such as etherification, esterification, substitution, coupling, etc. In 2025, global 4-Chlorophenol production reached approximately 99,500 Tons, with an average global market price of around US\$ 1,642 per ton.

4-chlorophenol is a mature chlorinated phenol fine chemical intermediate, with market demand mainly coming from fields such as pesticides, pharmaceuticals, dyes, disinfection and anti-corrosion, specialty chemicals, and analytical reagents. Its market value does not lie in its end consumer attributes, but in its ability as a chlorinated aromatic structural unit to extend downstream to herbicides, fungicides, pharmaceutical intermediates, reactive dyes, flame retardant or preservative systems, and other fine chemical synthetic products. The current market presents typical characteristics of intermediates, regionalization, and compliance: on the one hand, the demand for agrochemical and pharmaceutical intermediates remains the basic support, especially in the Asian fine chemical industry chain, where 4-chlorophenol has stable supporting consumption; On the other hand, chlorinated phenolic products have certain toxicity and environmental control pressure. Production enterprises need to invest more costs in wastewater treatment, control of chlorination by-products, occupational health, and

transportation compliance. Small factories with outdated production capacity and unstable environmental protection are more likely to be squeezed out. The focus of future competition will shift from simple price competition to stable supply, purity control, impurity mass spectrometry management, green processes, and downstream supporting capabilities.
