According to our (Global Info Research) latest study, the global 4-Isopropylbenzaldehyde market size was valued at US\$ 14.72 million in 2025 and is forecast to a readjusted size of US\$ 19.16 million by 2032 with a CAGR of 3.8% during review period.

4-Isopropylbenzaldehyde is a naturally occurring organic compound, a derivative of benzaldehyde, and is a colorless to pale yellow oily liquid at room temperature. It has a pleasant aroma similar to cumin and cinnamon, and is widely found in essential oils of cumin, myrrh, and eucalyptus. It is mainly used as a flavoring additive in perfumes, cosmetics, and food, and also as a pharmaceutical intermediate.

Upstream raw materials mainly involve isopropylbenzene produced through petrochemical processes, or extracted from natural plants (such as cumin seeds). Therefore, the upstream supply is directly related to the supply and price fluctuations of bulk chemical raw materials such as toluene and isopropylbenzene. Downstream applications are broad, making it a typical high-value-added fine chemical intermediate. Global sales in 2025 were approximately 3,200 tons, with an average selling price of US\$4,472 per ton. The industry's gross profit margin is between 20% and 30%.
