Abstracts

According to our (Global Info Research) latest study, the global 4-stroke Marine Engine market size was valued at US\$ 785 million in 2025 and is forecast to a readjusted size of US\$ 997 million by 2032 with a CAGR of 3.4% during review period.

In 2025, global 4-stroke Marine Engine production reached approximately 340 k units?with an average global market price of around US\$ 2,400 per unit, and a gross profit margin of approximately 20%-40%. 4-stroke Marine Engines are internal combustion engines designed for marine propulsion or onboard power generation, completing intake, compression, power, and exhaust strokes in four piston movements. They are widely used in commercial vessels, offshore support vessels, ferries, fishing vessels, tugboats, patrol boats, cruise ships, workboats, and marine generator sets. Compared with two-stroke marine engines, four-stroke engines are commonly used in medium-speed and high-speed applications, offering flexible installation, better part-load performance, easier maintenance, and suitability for diesel, dual-fuel, gas, and alternative fuel configurations. The industrial chain of 4-stroke Marine Engines includes upstream castings, crankshafts, cylinder liners, pistons, turbochargers, fuel injection systems, control units, cooling systems, lubrication systems, sensors, exhaust treatment systems, bearings, seals, and marine-grade steel components. The midstream includes engine design, machining, assembly, calibration, emission control integration, performance testing, classification approval, and quality control. Downstream applications include shipyards, vessel owners, marine operators, offshore engineering, fishing fleets, ferry operators, naval auxiliary vessels, marine power generation, and retrofit projects. Related services include installation, commissioning, spare parts supply, maintenance, overhaul, emission upgrades, and lifecycle technical support.
