Abstracts

According to our (Global Info Research) latest study, the global 4-tert-Butoxystyrene market size was valued at US\$ 131 million in 2025 and is forecast to a readjusted size of US\$ 198 million by 2032 with a CAGR of 6.1% during review period.

4-tert-Butoxystyrene (pTBS, CAS: 95418-58-9) is an electron-rich styrene derivative that is a colorless liquid with a strong, sweet aroma. As an important photoresist monomer, it is commonly used in the preparation of heat-resistant and corrosion-resistant specialty polymer materials (especially KrF photoresist resins) and as an intermediate in organic synthesis.

The upstream segment primarily relies on the fine synthesis of styrene derivatives. Key raw materials include p-hydroxystyrene and isobutene. The synthesis pathway typically involves an etherification reaction under acidic catalysis. The midstream segment involves the production of PTBST monomers and the preparation of high-molecular-weight polymers, a field with extremely high production process barriers.

In 2025, global sales are projected to be approximately 280 tons, with an average market price of approximately US\$455/kg. The industry's gross profit margin is in the range of 15%-30%.

As a core functional monomer for 248nm (KrF) photoresist resins, the market demand for 4-tert-butoxystyrene is highly correlated with the maturity of the semiconductor industry.

The expansion of AI computing infrastructure has driven the demand for high-

performance logic chips, and the non-core layers of these chips still rely on PTBST-based photoresists. Furthermore, the global trend of 'localization' in the semiconductor supply chain is prompting downstream resin manufacturers to actively seek stable, high-purity monomer suppliers.

4-tert-Butoxystyrene (PTBST) has extremely high purity requirements. Photolithography-grade PTBST demands strict control over metal ion impurities; even minute fluctuations can lead to failure in the development of downstream photoresists. This technical barrier limits entry for most conventional fine chemical companies.
