Abstracts

The global 4-Vinylbenzaldehyde market size is expected to reach \$ 67.29 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of 4-vinylbenzaldehyde was approximately 740 tons, with an average selling price of about US\$62/kg. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 15-25%. 4-vinylbenzaldehyde is an important organic intermediate, belonging to the class of aromatic aldehydes. Its structure contains both an aldehyde group and a vinyl group, and it is used in chemical synthesis to build complex molecules, particularly in the fields of pharmaceuticals, dyes, fragrances, new materials, and polymers. It is often prepared from raw materials such as p-methylbenzaldehyde.

The main upstream raw materials for 4-vinylbenzaldehyde are p-bromobenzaldehyde, vinyl Grignard reagent, or p-methylbenzaldehyde with halogenomethylation/oxidation reagents such as dichloromethyl methyl ether. Its downstream applications are highly focused on high-value-added industries, mainly including the pharmaceutical field (as a key intermediate in the synthesis of targeted anticancer drugs such as tyrosine kinase inhibitors), the high-end display materials industry (used in the manufacture of liquid crystal monomers, especially TFT-LCD display materials), and the special polymer materials field (as a functional monomer or crosslinking agent, used in the preparation of high-performance materials such as ion exchange resins and photosensitive polymers).

This report studies the global 4-Vinylbenzaldehyde production, demand, key manufacturers, and key regions.
