Abstracts

The global 4-Vinylphenyl Acetate market size is expected to reach \$ 89.06 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

4-Vinylphenyl Acetate (CAS: 2628-16-2) is an aromatic functional vinyl monomer. Its structure consists of a polymerizable vinyl group and an acetate-protected phenolic group attached at the para positions of a benzene ring.

The compound can undergo free-radical homopolymerization or copolymerization with other vinyl monomers. After polymerization, the acetate groups may be hydrolyzed to generate phenolic hydroxyl groups, producing polyhydroxystyrene or related hydroxyl-functional polymers. It is therefore primarily used as a protected hydroxystyrene monomer for photoresist polymers, electronic materials, ion-exchange resins and other specialty functional polymers. The products are generally supplied as inhibitor-stabilized liquids because the vinyl group is susceptible to unintended polymerization during storage and transportation.

In 2025, global sales of 4-Vinylphenyl Acetate reached approximately 503 tons, with an average global market price of around US\$ 102/kg. As a niche chemical, its global production capacity is low, and its gross profit margin is approximately 20%-40%.

This report studies the global 4-Vinylphenyl Acetate production, demand, key manufacturers, and key regions.
