Abstracts

According to our (Global Info Research) latest study, the global 4-Wire Resistive Touch Screen Controller market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The 4-wire resistive touch screen controller is a common touch screen control chip, which is used to measure and identify the position and pressure of the resistive touch screen, convert the touch position into numerical output, and realize the interactive control of the touch screen. The 4-wire resistive touch screen controller needs to be used in conjunction with the resistive touch screen. The resistive touch screen is composed of two layers of ITO film. By setting 4 electrodes on the ITO film, 4 resistors are formed. When a finger touches the touch screen, the ITO film will produce a change in resistance value, and the 4-wire resistive touch screen controller calculates the coordinates of the touch position by measuring the change in resistance value.
