The global 4A Molecular Sieve Raw Powder market size is expected to reach \$ 1783 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

4A molecular sieve raw powder is a sodium type microporous aluminosilicate powder material in the A-type molecular sieve system, with a uniform pore size structure of about 4 angstroms, which can preferentially adsorb water and small molecules with smaller diameters. It is usually formed by hydrothermal synthesis of silicon and aluminum sources to form LTA crystal structure, which is the basic raw material for preparing granular, strip-shaped molecular sieves and functional adsorption materials. It can also be directly used as an industrial adsorption filler for drying and moisture control systems. In 2025, global 4A Molecular Sieve Raw Powder production reached approximately 589 K MT, with an average global market price of around US\$ 2,082 per MT.

4A molecular sieve raw powder is one of the most widely used and high-yield basic categories in the molecular sieve material system. The demand is mainly concentrated in the fields of detergent additives, industrial gas drying, solvent dehydration, and refrigeration systems. Among them, phosphate free additives for detergents are the largest consumption scenario, making them have obvious bulk chemical properties; From the perspective of market structure, China is a major production and consumption center in the world, occupying an important share through the large-scale chemical industry chain, while the European and American markets are more concentrated in the fields of high-performance industrial drying and high-end applications; From the perspective of competitive landscape, the industry concentration is moderate, and top enterprises have an advantage through process optimization and low-cost scale

production. At the same time, small and medium-sized enterprises have a high participation in regional trade and customized products; From the perspective of development trends, in the context of environmental policies promoting the continuous penetration of phosphate free detergents, coupled with the increasing demand for industrial energy conservation and efficient adsorption, the overall market for 4A molecular sieve raw powder has maintained stable growth and is developing towards high purification, fine powder, and multifunctional composite applications.
