## Abstracts

According to our (Global Info Research) latest study, the global 4G LTE and 5G Gateway market size was valued at US\$ 1711 million in 2024 and is forecast to a readjusted size of USD 2709 million by 2031 with a CAGR of 7.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

4G LTE and 5G gateways are gateway devices that integrate 4G LTE and 5G cellular wireless communication functions. They are used to connect wired networks or local networks such as serial ports and Wi-Fi to the Internet to achieve remote data transmission and management. In 2023, global shipments will exceed 6.3 million units, with a total market size of approximately US\$1.6 billion. It is expected to grow to approximately US\$1.65 billion in 2024, with a compound annual growth rate of approximately 7.5% in the next ten years. The price of a single unit varies significantly due to application scenarios and functions. The mainstream price of 4G LTE gateways ranges from US\$86.95 to US\$228.94; the price of 5G CPE gateways ranges from US\$89.99 to US\$699. Market opportunities mainly come from the digital upgrade needs of industrial Internet of Things, smart cities, energy and utilities, and transportation and logistics, as well as companies' continued investment in reliable, low-latency wireless backup connections. Technology trends include integration with edge computing and AI, support for Wi-Fi 6/6E and multi-mode connections, and expansion of secure and reinforced VPN and SD-WAN functions. Future directions will focus on support for higher frequency bands (such as 6 GHz and millimeter wave), multi-mode and multi-antenna design with wider bandwidth and lower power consumption, and end-to-end

enterprise-level communication solutions combining private 5G networks and network slicing.
