Abstracts

The global 4G and 5G Private Mobile Networks (PMN) market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the field of industry and smart cities, a number of players are interested in private 5G. Globally, the private 5G market is rapidly expanding due to the rapid growth of industrial and commercial applications requiring high-quality connectivity and reduced latency. Private 5G offers dedicated, secure and flexible connectivity for businesses and industries, allowing them to enjoy 5G speed and reliability without having to connect to a public network.

The main industries subject to the private 5G are automated factories, smart warehouses, intelligent transportation systems, health and medical care, mining, etc.

Technology and service providers (TSPs), such as CSPs, network equipment providers (NEPs), system integrators (SIs) and hyperscalers, offer 4G/5G private mobile network (PMN) service to vertical markets, such as healthcare, manufacturing, mining, utilities, higher education and ports. PMNs are dedicated for a given enterprise client, providing higher performance, security and reliability than public cellular networks. PMN offerings can include voice, video, messaging and broadband data, as well as specific critical communications features (such as lone worker protection [LWP] or push-to-talk over cellular [PTToC]). PMNs can then support use cases around HD video, data, artificial intelligence (AI)/machine learning (ML) and IoT, and run on-site or in a cloud, or a multiaccess edge computing data center (MEC DC).A vendor PMN product and services portfolio may include some of the following: Radio access network (RAN), Packet core, SIM management, Transport, Edge, Network security, Managed WAN,
