## Abstracts

According to our (Global Info Research) latest study, the global 4G Wireless Infrastructure market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

4G wireless infrastructure is rapidly evolving into heterogeneous networks with multiple sizes and base station levels, including macro cells, city cells, small cells, and large-scale MIMO AAS. Operators around the world have already deployed 4G base stations in bands up to 6 GHz.

Telecom operators will gradually increase their independent (NSA) and independent (SA) 5G network capacity, and by 2023, 15% of the world's telecom operators will no longer rely on 4G network infrastructure to build 5G networks.

This will lead to a rapid withdrawal of investment in the wireless market from LTE/4G and a rapid decline in spending in traditional RAN infrastructure.

The Global Info Research report includes an overview of the development of the 4G Wireless Infrastructure industry chain, the market status of Military Use (Communication Towers, Transmitting antenna), Civil Use (Communication Towers, Transmitting antenna), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of 4G Wireless Infrastructure.
