Abstracts

The global 4K Computer Screen market size is expected to reach \$ 6856 million by 2032, rising at a market growth of 9.3% CAGR during the forecast period (2026-2032).

In 2025, global 4K Computer Screen production reached approximately 7.15 million units, with an average global market price of around US\$500 per unit.

A 4K computer screen is an ultra-high-definition display with a resolution of 3840x2160 pixels, offering finer image details and more accurate color reproduction. It is widely used in professional design, film production, gaming, high-end office work, and financial trading. Compared to 2K screens, 4K displays provide more visual detail and larger workspace, particularly beneficial for graphic editing, video post-production, and high-precision engineering. With the growing demand for content creation and high-resolution video, 4K computer screens continue to expand their share in the high-end market.

The upstream of 4K computer screens includes display panel manufacturers, backlight module suppliers, LCD/OLED material providers, driver IC manufacturers, and glass substrates. Representative companies include Samsung Display, LG Display, BOE, and CSOT. The downstream primarily consists of laptops, all-in-one PCs, high-end desktops, and professional monitors, including brands such as Apple, Dell, HP, Lenovo, and ASUS. The supply chain forms a complete ecosystem from raw material supply ? panel fabrication ? module assembly ? end-device integration.

The 4K computer screen market primarily targets mid-to-high-end and professional users, with overall market growth being steady. As demand for 4K content, gaming, and creative design increases, the penetration of 4K monitors is gradually rising, particularly

in high-end laptops, professional displays, and esports sectors. Upstream panel manufacturers have optimized production capacity, and raw material and driver IC supplies are relatively stable, helping control costs and maintain margins. However, the higher price of 4K screens creates a barrier for general office or mass-market users. Meanwhile, 2K and 1080p monitors continue to dominate the mid-range and entry-level markets, leading to intense competition. Overall, 4K monitors have growth potential in the high-end market, but market penetration is influenced by price, performance thresholds, and downstream demand fluctuations.
