The 4th axis indexing plate is a mechanical device used to control the fourth-axis rotation of mechanical equipment or robots. In machining, automated production, and robotic applications, multi-axis systems are often used to achieve precise positioning and control of workpieces or tools. The fourth axis refers to the axis of rotation relative to other axes (such as the X-axis, Y-axis, and Z-axis) during rotation around the object. It allows the workpiece or tool to rotate around a fixed center point during processing, thereby achieving more flexible processing and control.
