According to our (Global Info Research) latest study, the global 5-Amino-O-Cresol market size was valued at US\$ 33.24 million in 2025 and is forecast to a readjusted size of US\$ 45.62 million by 2032 with a CAGR of 4.6% during review period.

5-amino-o-cresol, CAS 2835-95-2? It is an aromatic fine chemical containing amino, hydroxyl, and methyl substituents, with a molecular formula of C₇H₉NO and a molecular weight of approximately 123.16. It is usually a solid or crystalline powder at room temperature. This product is mainly used as an intermediate for oxidative hair dyes, hair dye coupling agents, cosmetic dye raw materials, and small batch organic synthesis reagents. In 2025, global 5-Amino-O-Cresol production reached approximately 850 Tons, with an average global market price of around US\$ 38 per kg.

5-amino-o-cresol belongs to the category of small batch, high-purity, and regulatory sensitive hair dye intermediates. The market demand is mainly driven by oxidative hair dyes, cosmetic pigment intermediates, customized synthesis, and laboratory reagents. Its commercial value is focused on purity stability, color expression, impurity control, batch consistency, and cosmetic compliance documents, rather than large-scale chemical expansion. As global hair dye consumption extends from whitening needs to fashionable hair dyes, mild formulas, and multi-color products, this product still has stable demand. However, aromatic amine hair dye ingredients are constrained by cosmetic safety regulations and restriction requirements, and brand associations are more inclined to choose suppliers with stable quality systems, low impurity control, and complete safety documents. Overall, the 5-amino-o-cresol market is unlikely to experience significant bulk volume growth, and will focus more on high purification, customization, compliance, and regional supply chain stabilization in the future.
