According to our (Global Info Research) latest study, the global 5-Axis Galvo Scan Head market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A 5-axis galvo scan head is a device used in laser systems for precise control and manipulation of laser beams. It consists of two galvanometer scanners, each with two axes of rotation (X and Y), and an additional axis of rotation (Z) for focusing the laser beam. The galvo scan head is typically used in laser marking, engraving, cutting, and welding applications, where high-speed and accurate positioning of the laser beam is required. The 5-axis capability allows for more flexibility and control in directing the laser beam to different points in three-dimensional space.
