Abstracts

The global 5A Molecular Sieve Raw Powder market size is expected to reach \$ 934 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

5A molecular sieve raw powder is a calcium type microporous aluminosilicate powder material in the A-type molecular sieve system. It is prepared by calcium ion exchange from 4A molecular sieve and has a uniform pore size structure of about 5 angstroms. It can selectively adsorb straight chain hydrocarbon molecules and some medium-sized organic molecules, and has a blocking effect on branched chain hydrocarbon molecules. It is widely used as a basic raw material in gas separation, hydrocarbon separation, and industrial drying fields, and can be further processed into granular or strip-shaped molecular sieve products for use. In 2025, global 5A Molecular Sieve Raw Powder production reached approximately 300 K MT, with an average global market price of around US\$ 2,176 per MT.

The overall market for 5A molecular sieve raw powder belongs to the mid to high end molecular sieve sub segment, with demand mainly coming from industrial systems such as petrochemicals, natural gas processing, fine chemicals, and gas separation. Among them, the separation of n-alkanes and hydrogen purification are the core application scenarios, making it have high technological barriers and added value; From the perspective of supply structure, European and American companies still have an advantage in high consistency and high stability products, while Chinese companies are gradually increasing their global market share by relying on large-scale production capacity; From the perspective of industry trends, with the upgrading of refining equipment, the increasing demand for natural gas purification, and the development of the hydrogen energy industry, the demand for 5A molecular sieve raw powder continues

to steadily increase, while the industry continues to upgrade towards high selective adsorption, high cycle stability, and low-energy regeneration; From the perspective of competitive landscape, the concentration of this field is relatively higher, and the ability to adapt technology, processes, and downstream working conditions has become the core competitive factor, presenting an overall market characteristic of 'high barriers+stable growth+high added value'.
