## Abstracts

According to our (Global Info Research) latest study, the global 5G Base Station Printed Circuit Board market size was valued at US\$ 4066 million in 2024 and is forecast to a readjusted size of USD 6031 million by 2031 with a CAGR of 5.9% during review period.

With the increase in 5G frequency bands and higher frequencies, the number of RF front-end components has increased significantly. On the other hand, with the significant increase of 5G transmission data, higher requirements are placed on the data processing capability of the base station BBU, and the BBU will occupy a larger area. For higher-layer PCBs??, high-speed and high-frequency materials are required for the substrate. The selection of the board must meet the requirements of high frequency and high speed, and the impedance matching, stacking planning, wiring spacing/holes, etc. must meet the signal integrity requirements, which can be determined from loss, embedding, high frequency phase/amplitude, mixed voltage, heat dissipation characteristics and PIM characteristics. The characteristics of 5G communication PCB are high density, integration, high frequency, multi-layer, miniaturization and high speed.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
