Abstracts

According to our (Global Info Research) latest study, the global 5G Cloud Small Base Stations market size was valued at USD 1815.3 million in 2022 and is forecast to a readjusted size of USD 33000 million by 2029 with a CAGR of 51.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The 5G cloud small station combines cloud computing, big data, and artificial intelligence. For some scenarios with complex deployment environments and limited power supply, the 5G cloud small station has a wide range of application scenarios; at the same time, in industrial scenarios, the 5G cloud small station can be compared with high-precision Indoor positioning is combined to improve production capacity and work efficiency; in addition, because the small station architecture is more open, it is easier to integrate applications and third-party construction to achieve integrated outdoor deployment, which has good prospects in scenarios such as smart transportation and smart parks.

The 5G cloud small station system is designed to support the 5G system based on the C-RAN architecture. The system consists of BU (baseband unit), EU (extension unit), and RU (remote unit). The system establishes a connection with the base station gateway and the edge computing MEC device or the core network (EPC) through a BU (baseband unit).
