According to our (Global Info Research) latest study, the global 3D Dental Scanners market size was valued at USD 2381.5 million in 2023 and is forecast to a readjusted size of USD 3219.7 million by 2030 with a CAGR of 4.4% during review period.

3D dental scanner is a device that identifies, analyzes, collects and draws/displays shapes or three-dimensional models of dental or solid objects. A 3D dental scanner enables the capture of geometric shapes and the recreation of the physical appearance of tangible objects, allowing them to be built and displayed on a computer device.

According to the report, one of the major drivers for this market is Increasing affordability among people. The rapidly dropping prices of dental scanners as well as increasing availability of low-cost quality dental scanners is enabling dentists to adopt these products at a faster rate. Also, the added benefit of decreasing time consumption for one patient's diagnosis and treatment, broadens their spectrum of reach to more patients, thus increasing their profit. The companies are continuously focusing on developing affordable dental scanners. For instance, Dental Wings is using a biocompatible finish for the wand that helps to reduce the manufacturing cost.
