Abstracts

According to our (Global Info Research) latest study, the global 5G Lightweight Industrial-grade Router market size was valued at US\$ 844 million in 2024 and is forecast to a readjusted size of USD 1179 million by 2031 with a CAGR of 4.9% during review period.

5G RedCap, or 5G reduced capability version (Reduced Capability), is a 5G lightweight user terminal type proposed in 3GPP Rel-17. It greatly reduces the cost of 5G chips, modules and terminals by reducing terminal bandwidth, reducing the number of transmitting and receiving antennas, and reducing modulation orders. RedCap industrial routers are mainly targeted at scenarios such as industrial wireless sensors, video surveillance and wearable devices, and can significantly reduce the cost of 5G chips, modules and terminals while meeting such business needs. Compared with traditional 4G technology, 5G RedCap servers have the characteristics of high speed, low latency, low cost (reduced by more than 60% to 70%), and strong stability.
