Abstracts

The global 5G Non-Terrestrial Networks market size is expected to reach \$ 12600 million by 2029, rising at a market growth of 18.1% CAGR during the forecast period (2023-2029).

5G Non-Terrestrial Networks (NTN) refer to the use of satellite or high-altitude platforms, such as drones or balloons, to provide 5G wireless connectivity to users. These networks are being developed to address the challenges of providing connectivity in remote or hard-to-reach areas where traditional terrestrial networks are not practical. 5G NTN is expected to provide a wide range of benefits, including improved coverage and capacity, reduced latency, and increased reliability. It is also expected to support a wide range of applications, including internet of things (IoT) devices, autonomous vehicles, and remote healthcare services.
