## Abstracts

According to our (Global Info Research) latest study, the global 5G Small Cells market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Small-cell base stations, known as transceivers, use low power and are implemented in densely populated areas and are cheaper and much faster to deploy than the larger macrocells. As 5G transmitter range is so limited, multiple small-cell antennas are needed to provide the services that 5G promises. Small cells transmit signals using advanced techniques MIMO, beamforming and mmWaves. Using the small-cell model, low-power transmitting stations can easily be deployed. They can be mounted on walls for indoor applications, or on lamp posts outdoors.

5G is a key and cross-age technology that opens the era of the Internet of Everything, and all countries are grabbing market share. The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

China is a leader in 5G technology. According to the latest statistics from the Ministry of Industry and Information Technology, China newly added 887,000 5G base stations in 2022 (currently reaching 2.312 million, accounting for more than 60% of the world's total), and 110 cities in China have reached gigabit city construction standard. According to the Digital China Development Report (2022) released by the State Internet Information Office, by the end of 2022, China had built a total of 2.312 million 5G base stations, with 561 million 5G users, accounting for more than 60% of the world.
