## Abstracts

The global 5G Stacker market size is expected to reach \$ 6144 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

5G Stacker typically refers to a new generation of core equipment in automated warehouses (AS/RS) that incorporates 5G communication and edge control, building upon traditional stacker cranes to achieve remote collaboration, low-latency control, and large-scale device interconnection. Stacker cranes are automated devices that run along tracks within high-bay aisles, using lifting and telescopic mechanisms to store and retrieve goods. Widely deployed in AS/RS, they can handle pallet or box loads at heights of tens of meters within narrow aisles, improving space utilization and operational efficiency.

In 2025, global 5G Stacker sales reached approximately 30,033 Units, with an average global market price of around 145,354 US\$/Units. Production capacity reached 35,000 Units, with a gross profit margin of approximately 32%.

The core components of a 5G Stacker include steel structures and welded parts, drive and braking systems, transmission chains, sensors and safety components, and electronic control and software systems. Suppliers like SSI Schaefer leverage their integrated capabilities in mechanical structure, steel structure, and control engineering to provide complete machine design and system integration for high-bay warehousing.

With the deployment of 5G private networks in large manufacturing plants and smart parks, cases have emerged in Asia and Europe of stacker cranes, conveyor lines, robotic picking stations, AGVs/AMRs, and other equipment connected through a unified 5G network. This upgrades stacker cranes from 'standalone automated equipment' to 'programmable mobile resources,' enabling warehouse operators to monitor equipment

status, perform predictive maintenance, and dynamically allocate tasks on a larger scale. For upstream control system and communication module manufacturers, this architecture increases added value and technology stickiness; for downstream e-commerce, third-party logistics, and discrete manufacturing companies, it reserves space for flexible expansion and intelligent scheduling while maintaining stability and efficiency.

This report studies the global 5G Stacker production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for 5G Stacker and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
