Abstracts

According to our (Global Info Research) latest study, the global 5G Technology in Emergency Services market size was valued at USD 927.4 million in 2023 and is forecast to a readjusted size of USD 8611.3 million by 2030 with a CAGR of 37.5% during review period.

5G will further enrich the data provided to emergency services field operatives through more high definition video and imaging, with data speeds of over 100Mbps and up to 10Gbps. This would also enable augmented reality, helping paramedics administer aid or use equipment, letting drivers find the most efficient route based on real-time traffic and showing fire crews the way through smoke-filled buildings. 5G will allow real-time remote control of devices, such as drones, as it has very low latency of less than 10ms. Drones could be first on the scene, monitoring the situation as support vehicles navigate traffic. They could easily get a birds-eye view of building fires before sending rescue workers in. And they could carry essential medicine to the scene of an accident that's causing traffic jams.

Top 3 5G technology in emergency services players in Global Market are Huawei, Nokia and Ericsson, hold a share around 45%. Asia-Pacific is the largest market, occupied for around 50 percent, followed around 30% market share for Europe. In terms of type, EMBB occupied a market share around 40 percent. In terms of application, emergency medical services is the largest downstream market with a share about 40T
