According to our (Global Info Research) latest study, the global 6-Axis Stages market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A 6-axis stage, also known as a 6-degree-of-freedom (6-DOF) stage or hexapod, is a highly versatile and advanced motion control system that provides movement in six different degrees of freedom. These stages are used in various industrial and scientific applications that require precise positioning and motion control in multiple directions simultaneously. The six degrees of freedom typically include three translational movements (X, Y, and Z axes) and three rotational movements (pitch, roll, and yaw).
