Abstracts

According to our (Global Info Research) latest study, the global 6-Hexanolactone market size was valued at US\$ 346 million in 2025 and is forecast to a readjusted size of US\$ 497 million by 2032 with a CAGR of 5.5% during review period.

6-Hexanolactone (also known as ϵ -caprolactone) is a colorless, oily liquid belonging to the cyclic ester class of compounds. It has a distinctive odor, is readily soluble in water and most organic solvents, and is a key monomer and raw material for the synthesis of polycaprolactone (PCL), high-end polyurethane, elastomers, coatings, and adhesives. Global sales in 2025 were approximately 50,000 tons, with an average selling price of around \$6,735 per ton. The industry's gross profit margin is approximately 32%.

The core upstream raw materials are cyclohexanone and peroxide, produced via the Baeyer-Villiger oxidation process. 6-Caprolactone production capacity is highly concentrated, primarily in Germany, Japan, and the United States. In recent years, China's production capacity has gradually increased; for example, Hunan Juren New Materials disclosed that its 50,000-ton/year caprolactone project entered trial operation in 2023 and has gradually stabilized.
