Abstracts

The global 600 MHz Nuclear Magnetic Resonance Spectrometer market size is expected to reach \$ 187 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Nuclear magnetic resonance (NMR) spectrometer is the most powerful analytical tool currently available to an organic chemist. NMR allows characterization of a very small amount of sample (10mg), and does not destroy the sample (non-destructive technique). NMR spectra can provide vast information about a molecule's structure and can very often be the only way to prove what the compound really is. Typically though, NMR is used in conjunction with other types of spectroscopy and chemical analysis to fully confirm a complicated molecule's structure.

The major global manufacturers of 600MHz NMR spectrometers are Bruker and Jeol, with Bruker leading the industry with 88% market share. Europe is the largest consumption place, with a consumption market share nearly 35%. Following Europe, Asia-Pacific is the second largest consumption place with the consumption market share of 31%.

This report studies the global 600 MHz Nuclear Magnetic Resonance Spectrometer production, demand, key manufacturers, and key regions.
