Abstracts

The global 64 Slice CT Scanner market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The major consumer markets for 64 Slice Computerized Tomography Scanner are North America and the Asia Pacific region. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the medical industry will see certain growth. As the global medical level continues to improve, more and more hospitals and clinics are able to carry out CT examination. As a result, the demand for 64 Slice Computerized Tomography Scanner will grow within the foreseeable future.

A 64 slice computed tomography (CT) scanner is a medical imaging device that uses X-rays to produce detailed images of the body. The '64-slice' refers to the number of detectors in the scanner array, which can capture multiple slices of the body with each rotation of the scanner. This allows for faster and more detailed imaging than earlier generations of CT scanners. With a 64-slice CT scanner, doctors can produce highly detailed images of organs, blood vessels, and bones, making it a valuable tool in diagnosing a range of conditions such as cancer, heart disease, and injuries.
