According to our latest research, the global 6G Hardware market size will reach USD million in 2029, growing at a CAGR of % over the analysis period.

6G (sixth generation wireless) is the successor to 5G cellular technology. 6G networks will be able to use higher frequencies than 5G networks and offer higher capacity and lower latency. One of the goals of 6G internet is to support communications with one microsecond latency. This is 1,000x faster than 1ms throughput, or 1/1000th the latency. The 6G technology market is expected to facilitate substantial improvements in the areas of imaging, presence technology, and location awareness. Used in conjunction with artificial intelligence (AI), 6G computing infrastructure will be able to determine the best place for computing to occur; this includes decisions about data storage, processing and sharing.
