Abstracts

The global 6G Hardware market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

6G (sixth generation wireless) is the successor to 5G cellular technology. 6G networks will be able to use higher frequencies than 5G networks and offer higher capacity and lower latency. One of the goals of 6G internet is to support communications with one microsecond latency. This is 1,000x faster than 1ms throughput, or 1/1000th the latency. The 6G technology market is expected to facilitate substantial improvements in the areas of imaging, presence technology, and location awareness. Used in conjunction with artificial intelligence (AI), 6G computing infrastructure will be able to determine the best place for computing to occur; this includes decisions about data storage, processing and sharing.

This report studies the global 6G Hardware demand, key companies, and key regions.
