## Abstracts

According to our (Global Info Research) latest study, the global 6G Infrastructure market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of 19.5% during review period.

6G Infrastructure refers to the comprehensive physical and logical framework designed to support the sixth generation of wireless communication technologies. Moving beyond the limitations of 5G, 6G infrastructure is characterized by the Space-Air-Ground-Sea Integrated Network (SAGSIN), incorporating low-earth orbit (LEO) satellites and high-altitude platform stations (HAPS) to achieve global ubiquitous connectivity. It leverages the Terahertz (THz) spectrum and visible light communication to deliver peak data rates of up to 1 Tbps. A defining feature of 6G infrastructure is its AI-native architecture, which integrates sensing, communication, and computation, enabling the network to act as a 'distributed neural network' for real-time digital twin synchronization and holographic communications.
