The global 6G Sub-THz Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A 6G Sub-THz tester is a specialized testing instrument designed for the characterization and evaluation of 6G (Sixth Generation) wireless communication systems and devices operating in the Sub-terahertz (Sub-THz) frequency range. Sub-THz frequencies refer to the portion of the electromagnetic spectrum just below the terahertz range, typically covering frequencies in the range of hundreds of gigahertz (GHz) up to a few terahertz (THz).

6G technology is expected to leverage the Sub-THz frequency band to enable ultra-high data rates, low-latency communications, and a wide range of innovative applications. Sub-THz testers play a crucial role in the development and testing of 6G technology by providing the means to assess the performance and characteristics of Sub-THz wireless communication systems.
