Abstracts

The global 7-Fluoroindole market size is expected to reach \$ 28.37 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of 7-Fluoroindole was approximately 4.85 tons, with the global average market price at around USD 3,250/kg. The gross margin of major producers in the industry was approximately 30%–50%. 7-Fluoroindole is a fluorinated indole fine chemical intermediate. It combines the heterocyclic reactivity of the indole ring with the structural modification value introduced by the fluorine substituent, and is mainly used in the synthesis of fluorinated indole derivatives. Its upstream materials mainly include fluorinated aromatic raw materials, indole precursors, solvents, catalysts and other organic synthesis auxiliaries; the midstream segment covers the synthesis, purification, crystallization and quality control of 7-Fluoroindole; and downstream applications include pharmaceuticals, agrochemicals, dyes and other fine chemical fields, with pharmaceutical and agrochemical intermediates representing the major demand areas. Due to its relatively small consumption volume, market supply is mainly characterized by small-batch, high-purity and customized production. Competition among producers is therefore focused on the stability of synthetic routes, impurity control capabilities and kilogram-scale or larger delivery capacity.

This report studies the global 7-Fluoroindole production, demand, key manufacturers, and key regions.
