According to our (Global Info Research) latest study, the global 7-in-1 eDrive System market size was valued at US\$ 2223 million in 2024 and is forecast to a readjusted size of USD 6271 million by 2031 with a CAGR of 15.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A 7-in-1 eDrive system is an advanced electric vehicle (EV) powertrain architecture that integrates seven critical components into a single, compact unit. This high level of integration aims to enhance efficiency, reduce weight and space requirements, and simplify vehicle assembly, leading to improved performance and cost savings. The integrated components of the seven-in-one electric drive system of different manufacturers are different, but usually include motors, motor controllers (MCU), reducers, DC converters (DC-DC), on-board chargers (OBC), power distribution units (PDU) and battery control units (BCU). For example, Huawei DriveONE seven-in-one electric drive system integrates these seven major components, realizing the deep integration of mechanical components and power components. In addition, the 'seven-in-one' electric drive system of the front axle of the Cadillac Regal 4WD model is jointly produced by SAIC Group and Weimaisi. In addition to the highly integrated OBC, DCDC, PDU, motor, motor controller and reducer, it also integrates the DCU domain controller.
