Abstracts

75 Ohm coaxial cable is a type of transmission line used for the transmission of high-frequency signals. This cable design is optimized for minimum signal attenuation and is widely used in various applications such as television distribution, cable internet, and other digital audio and video settings. The '75 Ohm' refers to the impedance of the cable, which is a measure of resistance it presents to the signal as it travels along the cable. The choice of 75 Ohms for these cables is based on a compromise between power handling capabilities and attenuation, making them ideal for the mentioned applications.
