According to our (Global Info Research) latest study, the global 3D Sensor market size was valued at USD 7703.7 million in 2023 and is forecast to a readjusted size of USD 19590 million by 2030 with a CAGR of 14.3% during review period.

3D Sensors is an object whose purpose is to detect events or changes in its environment, and then provide a corresponding output. A sensor is a type of transducer; sensors may provide various types of output, but typically use electrical or optical signals. For example, a thermocouple generates a known voltage (the output) in response to its temperature (the environment). A mercury-in-glass thermometer, similarly, converts measured temperature into expansion and contraction of a liquid, which can be read on a calibrated glass tube.

Global 3D Sensors key players include Microchip Technology, Infineon Technologies, Omnivision Technologies, Intel Corporation, Asustek Computer, etc. Global top five manufacturers hold a share over 30%.

Europe is the largest market, with a share about 30%, followed by China, and USA, both have a share about 55 percent.

In terms of product, Image is the largest segment, with a share over 40%. And in terms of application, the largest application is Consumer electronics, followed by Automobile, Medical care, Industrial robot, etc.
