The global A2B IC market size is expected to reach \$ 373.8 million by 2029, rising at a market growth of 11.4% CAGR during the forecast period (2023-2029).

A2B or “Automotive Audio Bus” is a new technology mainly developed for infotainment systems to reduce the weight and cost of the Audio harness. A2B bus is a single-master, multiple-slave system where the A2B transceiver chip at the host controller is master. A2B Transceiver chip supports multichannel digital audio over a single unshielded twisted pair wire. Also, the A2B bus transports a dc power supply to remote bus-powered nodes. A2B Transceiver connects multiple inter-IC sound (I2S) synchronous, pulse-code modulated (PCM) data over up to 15 meters between nodes and up to 40 meters overall length of all nodes.

The comprehensive A2B bus system includes transceiver, chips, wire etc core components, and they refer to different manufacturers. The data statistic scope is only for cable in this report, and we also provide some information about automotive audio bus analyser, transceiver etc manufacturers.

This report studies the global A2B IC production, demand, key manufacturers, and key regions.
