Abstracts

AAC apps are augmentative/alternative communication programs that allow a person to communicate with those around them without speaking. There are many different types of AAC but the most common are high-tech AAC Devices that allow a person to push a button to speak a message. Purchasing a dedicated AAC device can be expensive and going through insurance can take a long time. For that reason, many of the AAC companies have created AAC apps that can be downloaded and used on tablets, phones, and other devices for a fraction of the price. This report mainly focuses on AAC apps for children market.

According to our (Global Info Research) latest study, the global AAC Apps for Children market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The high-value AAC market is relatively small and concentrated in the United States and Europe. Limited funding remains a major challenge in promoting the use of AAC for people with communication disabilities. Smartphones and tablets are equally meeting user demands for standalone, high-tech AAC. AAC usually requires some form of hardware and software. Vendors previously sold standalone AAC systems that included all the basic hardware and software in the device. In recent years, smartphones and tablets have been able to emulate the operating functionality of some AAC products, and users who require AAC can also access a wider range of AAC software on the Internet, which can be downloaded to their own smartphone or tablet. , the cost reduction is more significant.
