AAC (Autoclaved Aerated Concrete) production line is a specialized manufacturing setup designed to produce aerated concrete blocks and panels, which are lightweight and highly insulated building materials. The production line typically includes several key components: raw material handling, mixing, molding, cutting, and autoclaving equipment. The process begins with the mixing of materials, including cement, lime, silica sand, water, and aluminum powder, to create a slurry. This slurry is then poured into molds, where it expands and sets before being cut into desired shapes. Finally, the green products are cured in an autoclave under high pressure and temperature to achieve the desired strength and durability. AAC production lines are widely used in construction for their energy efficiency and environmental benefits.
