Abstracts

According to our (Global Info Research) latest study, the global AAV Characterization Services market size was valued at US\$ 747 million in 2025 and is forecast to a readjusted size of US\$ 1746 million by 2032 with a CAGR of 12.8% during review period.

AAV Characterization Services refer to a comprehensive set of analytical and testing services that systematically evaluate critical quality attributes (CQAs) of Adeno-Associated Virus (AAV) vectors, including capsid identity, genome integrity, titer, empty/full capsid ratio, purity, potency, and impurity profiling (e.g., residual host cell DNA/proteins, endotoxins), using techniques like qPCR/ddPCR, CE-SDS, AUC, NGS, and cell-based assays, which are essential for ensuring vector safety, efficacy, and consistency across R&D, manufacturing, and regulatory compliance stages in gene therapy.

Demand for AAV Characterization Services is driven by the exponential growth of the global gene therapy market (AAV as the dominant vector), strict regulatory requirements for CQA assessment (e.g., FDA/EMA guidelines for IND filing and GMP release), and the need to mitigate risks from vector variability (e.g., empty capsids, impurities, genome truncations) that can cause clinical trial failures; business opportunities lie in end-to-end service portfolios covering discovery to commercialization, specialized GMP-compliant testing, and scalable high-throughput solutions, with strong demand from biotechs, CROs, and manufacturers seeking to accelerate time-to-market, ensure regulatory alignment, and optimize production processes, while niche opportunities exist in novel serotype characterization and advanced analytical method development.
