According to our (Global Info Research) latest study, the global Abamectin EC market size was valued at US\$ 1287 million in 2024 and is forecast to a readjusted size of USD 1653 million by 2031 with a CAGR of 4.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Abamectin EC is an insecticidal and acaricidal formulation containing abamectin as the primary active ingredient, derived from macrocyclic lactone antibiotics. It functions by irreversibly activating glutamate-gated chloride channels in pest nerve cells, causing hyperexcitation, paralysis, and death. This formulation is highly effective against a wide range of agricultural pests (e.g., spider mites, leaf miners, root-knot nematodes) and livestock parasites (e.g., scabies mites, gastrointestinal nematodes). The emulsifiable concentrate (EC) formulation consists of abamectin dissolved in organic solvents (e.g., xylene) with added emulsifiers, requiring dilution in water to form a stable emulsion for foliar spraying or soil application. Due to its high efficacy, low residue, and environmental compatibility, Abamectin EC is widely used in field crops, fruit trees, vegetables, and animal husbandry.
