Abamectin TC is the high-purity technical-grade active ingredient of abamectin, primarily composed of two homologs (B1a and B1b), derived from the fermentation of *Streptomyces avermitilis*. As a macrocyclic lactone compound, it disrupts neurotransmitter transmission in pests, leading to rapid paralysis and death, with potent activity against mites, nematodes, and certain insects. The technical material typically appears as a white to pale yellow crystalline powder with a purity >90%, requiring further processing into formulations such as emulsifiable concentrates (EC), wettable powders (WP), or microcapsules. Due to its unique mode of action and low cross-resistance risk, Abamectin TC is vital in agricultural pest control and veterinary antiparasitic applications.
