Ablative coating refers to a type of protective coating that is designed to gradually wear away or erode when exposed to high temperatures, flames, or other extreme conditions. This erosion process helps to dissipate heat and protect the underlying surface from damage. Ablative coatings are commonly used in aerospace applications, such as on spacecraft re-entry vehicles, as well as in industrial settings where high temperatures are present. These coatings provide a sacrificial layer that absorbs and deflects heat, ultimately extending the lifespan of the protected surface.
