Abstracts

Skin resurfacing procedures are performed using a laser, to reduce the texture of the skin, skin tone, skin aging and the imperfections found in the skin. Ablative skin resurfacing is also performed even for sun damaged skin, treating scars and stretch mark reduction and for different aesthetic reasons. Ablative skin resurfacing is one of the most effective aesthetic procedures for treating skin aging. Ablative skin resurfacing removes very thin layers of the skin. This technique is very useful for those patients who require drastic improvements in a single sitting. The ablative skin resurfacing process works by focusing a strong wavelength of light onto the skin; this removes the outermost layers of the damaged or imperfect skin.
